

XCTest Templates

Start your tests with less cruft

This package contains the XCTest file templates I use, because Apple's template contains extra stuff I don't want.

Installation

To install the XCTest Test Suite templates, access this folder from Terminal and type:

```
make install
```

If you are updating from the earlier pre-Swift version, also do

```
make uninstall_old
```

Then relaunch Xcode.

If you ever wish to remove them, type

```
make uninstall
```

AppCode

To access these templates from AppCode, create a new "File from Xcode Template".

Don't Have make?

If you don't have the make command, use the following command to install command line developer tools:

```
xcode-select --install
```
